$B C{ }^{\circledR}$ and VERSA-LAM ${ }^{\circledR}$ products shall be installed in dry-use applications only, per their respective ICC ESR evaluation reports.

## Residential Floor Span Tables

## About Floor Performance

Homeowner's expectations and opinions vary greatly due to the subjective nature of rating a new floor. Communication with the ultimate end user to determine their expectation is critical. Vibration is usually the cause of most complaints. Installing lateral bridging may help; however, squeaks may occur if not installed properly. Spacing the joists closer together does little to affect the perception of the floor's performance. The most common methods used to increase the performance and reduce vibration of wood floor systems is to
increase the joist depth, limit joist deflections, glue and screw a thicker, tongue-and-groove subfloor, install the joists vertically plumb with level-bearing supports, and install a direct-attached ceiling to the bottom flanges of the joists.
The floor span tables listed below offer three very different performance options, based on performance requirements of the homeowner.

| Joist <br> Depth | BCI ${ }^{\text {® }}$ Joist Series | $\star \star \star$ THREE STAR $\star \star \star$ |  |  |  |  | $\star \star \star$ * FOUR STAR $\star$ * $\star$ * |  |  |  |  | CAUTION $\begin{gathered}\star \\ \text { ALLOWIMUM STIFFNESS } \\ \text { ALLOW }\end{gathered}$ |  |  |  | CAUTION |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Live Load deflection limited to L/480: The common industry and design community standard for residential floor joists, 33\% stiffer than L/360 code minimum. However, floor performance may still be an issue in certain applications, especially with $91 / 2^{\prime \prime}$ and $117 / 8^{\prime \prime}$ deep joists without a direct-attached ceiling. |  |  |  |  | Live Load deflection limited to L/960+: In addition to providing a floor that is $100 \%$ stiffer than the three star floor, field experience has been incorporated into the values to provide a floor with a premium performance level for the more discriminating homeowner. |  |  |  |  | Live Load deflection limited to L/360: Floors that meet the minimum building code L/360 criteria are structurally sound to carry the specified loads; however, there is a much higher risk of floor performance issues. This table should only be used for applications where floor performance is not a concern. |  |  |  |  |

Span table is based on a residential floor load of 40 psf live load and 10 psf dead load ( 12 psf dead load for 90 s 2.0 joists).

- Span values assume ${ }^{23 / 32 \text { " minimum plywood/OSB rated sheathing is }}$ glued and nailed to joists for composite action (joists spaced at 32" o.c. require sheathing rated for such spacing $-7 / 8^{" 1}$ plywood/OSB).
- Span values represent the most restrictive of simple or multiple span applications. Analyze multiple span joists with BC CALC ${ }^{\circledR}$ sizing software if the length of any span is less than half the
length of an adjacent span
Span values are the maximum allowable clear distance between supports.
Table values assume minimum bearing lengths without web stiffeners for joist depths of 16 " inches and less.
Floor tile will increase dead load and may require specific deflection limits, contact Boise Cascade EWP Engineering for further information.

Boise Cascade EWP. Eastern Builder Guide • 4/25/2011 r 07/18/2011

## LATERAL SUPPORT

- $\mathrm{BCl}^{\circledR}$ Joists shall be laterally supported at the ends with hangers, rimboard, $\mathrm{BCl}{ }^{\ominus}$ rim joist or blocking panels. BCI® blocking panels or rimboard are required at cantilever supports.
- Blocking may be required at intermediate bearings for floor diaphragm per IRC in high seismic areas, consult local building official.
MINIMUM BEARING LENGTH FOR BCI ${ }^{\circledR}$ JOISTS
- Minimum end bearing: $11 / 2 "$ for $\mathrm{BCl} \mathrm{B}^{\circledR} 4500 \mathrm{~s}, 5000 \mathrm{~s}$, $6000 \mathrm{~s} \& 6500 \mathrm{~s}$; $13 / 4^{\prime \prime}$ for $\mathrm{BCl}{ }^{\oplus} 60 \mathrm{~s} \& 90 \mathrm{~s} .31 / 2{ }^{2}$ is required at cantilever and intermediate supports.
- Longer bearing lengths allow higher reaction values. Refer to the building code evaluation report or the BC CALC ${ }^{\text {® }}$ software.

## NAILING REQUIREMENTS

- $\mathrm{BCl}{ }^{\oplus}$ rim joist, rim board or closure panel to $\mathrm{BCl}{ }^{\circledR}$ joist:
- Rims or closure panel $11 / 4$ inches thick and less:

2-8d nails, one each in the top and bottom flange.

- BCl ${ }^{\oplus} 4500 \mathrm{~s}, 5000 \mathrm{~s}$ rim joist: 2-10d box nails, one each in the top and bottom flange.
- BCI ${ }^{\circledR} 6000$ s, 60 s rim joist: 2-16d box nails, one each in the top and bottom flange.
- $\mathrm{BCl}{ }^{\circledR} 6500 \mathrm{~s}, 90 \mathrm{~s}$ rim joist: Toe-nail top flange to rim joist with 2-10d box nails, one each side of flange.
- $\mathrm{BCl}^{\circledR}$ rim joist, rim board or $\mathrm{BCl}^{\circledR}$ blocking panel to support:
- 8d nails at 6 inches on center.
- When used for shear transfer, follow the building designer's specification.
- $\mathrm{BCl}{ }^{\circledast}$ joist to support:
- 2-8d nails, one on each side of the web, placed $11 / 2$ inches minimum from the end of the BCI ${ }^{\circledR}$ Joist to limit splitting.
- Sheathing to $\mathrm{BCl}{ }^{\text {® }}$ joist:
- Prescriptive residential floor sheathing nailing requires 8d common nails @ 6" o.c. on edges and @ 12" o.c. in the field (IRC Table R602.3(1)).
- See closest allowable nail spacing limits on page 10 for floor diaphragm nailing specified at closer spacing than IRC.
- Maximum nail spacing for minimum lateral stability: $18^{\prime \prime}$ for $\mathrm{BCl}^{\circledR} 4500$ s and $5000 \mathrm{~s}, 24^{\prime \prime}$ for larger $\mathrm{BCI}{ }^{\oplus}$ joist series.
- 14 gauge staples may be substituted for 8 d nails if the staples penetrate at least 1 inch into the joist.
- Wood screws may be acceptable, contact local building official and/or Boise Cascade EWP Engineering for further information.
BACKER AND FILLER BLOCK DIMENSIONS

| Series | Backer Block Thickness | Filler Block Thickness |
| :---: | :---: | :---: |
| 4500s 1.8 |  | Two $5 / 8$ " wood panels or $2 \mathrm{x}_{\text {_ }}$ |
| 5000s 1.8 | $3 / /^{\prime \prime}$ or $^{7 / 7 / s^{\prime}}$ wood panels | Two $3 / 4$ " wood panels or $2 x^{\prime}$ |
| 6000s 1.8 | $\begin{aligned} & 11 / \mathrm{s}^{\text {or two }} 1 / 1 /{ }^{\prime \prime} \\ & \text { wood panels } \end{aligned}$ | $2 x^{+}+7 / 16 "$ or $1 / 2^{\prime \prime}$ wood panel |
| 6500s 1.8 |  | $2 x^{\prime}+5 / 8{ }^{\prime \prime}$ or $3 / 44^{\prime \prime}$ wood panel |
| 60s 2.0 |  | $2 x^{+}+7 / 166^{\prime \prime}$ or $1 / 2^{\prime \prime}$ wood panel |
| 90s 2.0 | 2 x _lumber | Double 2 x _ lumber |

- Cut backer and filler blocks to a maximum depth equal to the web depth minus $1 / 4{ }^{\prime \prime}$ to avoid a forced fit.

## WEB STIFFENER REQUIREMENTS

- See Web Stiffener Requirements on page 9 of the Eastern Specifier Guide.

## PROTECT BCI ${ }^{\circledR}$ JOISTS FROM THE WEATHER

$\mathrm{BCI}{ }^{\oplus}$ Joists are intended only for applications that provide permanent protection from the weather.
Bundles of $\mathrm{BCl}{ }^{\circledR}$ Joists should be covered and stored off of the ground on stickers.

## BCI ${ }^{\circledR}$ RIM JOISTS AND BCI ${ }^{\circledR}$ BLOCKING

|  |  | 20 | 1'-1" | 2'-3' | 3'-6" | 4'-9" | 5'-11' | 6'-7' | 7'-2" | 8'-5" | 9'-6" |  |  |  |  |  |
| Round Hole Diameter [in] |  |  | 2 | 3 | 4 | 5 | 6 | 61/2 | 7 | 8 | $87 / 8$ | 9 | 10 | 11 | 12 | 13 |
| Rectangular Hole Side [in] |  |  | - | - | - | - | 2 | 3 | 3 | 5 | 6 | 6 | 8 | 9 | - | - |

Select a table row based on joist depth and the actual joist span rounded up to the nearest table span. Scan across the row to the column headed by the appropriate round hole diameter or rectangular hole side. Use the longest side of a rectangular hole. The table value is the closest that the centerline of the hole may be to the centerline of the nearest support.
The entire web may be cut out. DO NOT cut the flanges. Holes apply to either single or multiple joists in repetitive member conditions.

- For multiple holes, the amount of uncut web between holes must equal at least twice the diameter (or longest side) of the largest hole.
- $11 / 2^{\prime \prime}$ round knockouts in the web may be removed by using a short piece of metal pipe and hammer.
- Holes may be positioned vertically anywhere in the web. The joist may be set with the $11 / 2^{\prime \prime}$ knockout holes turned either up or down.
- This table was designed to apply to the design conditions covered by tables elsewhere in this publication. Use the BC CALC ${ }^{\circledR}$ software to check other hole sizes or holes under other design conditions. It may be possible to exceed the limitations of this table by analyzing a specific application with the BC CALC ${ }^{\circledR}$ software.

## Large Rectangular Holes in $\mathrm{BCl}^{\circledR}$ Joists

Hole size table based on maximum uniform load of 40 psf live load and 10 psf dead load, at maximum spacing of 24 " on-center.

| $\text { Q hole } \quad \text { See Max Hole Size on } \text { Chart for Joist Depth }$ | Joist Depth | Maximum Hole Size |  |

| Additional holes may be cut in the web provided they meet the specifications as shown in the hole distance chart shown above or as allowed using BC CALC® ${ }^{\circledR}$ sizing software. | 16" | $\begin{aligned} & 11 " \times 18 " \\ & 12 " \times 16 " \end{aligned}$ | 10" x 14" |

Multiple Span Joist

Larger holes may be possible for either Single or Multiple span joists; use BC CALC ${ }^{\circledR}$ sizing software for specific analysis.

## VERSA-LAM ${ }^{\circledR}$ Floor \& Roof Application Tables

GENERAL NOTES

- Table assumes that lateral support is provided at each support and continuously along the top edge and applicable compression edges of the beam.
- Minimum 3-inch end bearing or see BC CALC ${ }^{\circledR}$ software requirements.
- Bearing length specifications assume bearing across the full width of the beam.
- Uniform loading is assumed for all tables.
- Multiple member beams require proper connection schedules.
- Dry service conditions are assumed.
- It may be possible to exceed the limitations of this table by analyzing a specific application with the BC CALC® ${ }^{\circledR}$ software.

Floor Notes (see pages 5, 6, 9)

- Floor loads are 40 psf live load and 10 psf dead load.
- Deflection is limited to L/360 live load and L/240 total load.
- Table based upon either simple or continuous floor joist spans.
- Tables assume a wall weight of 100 plf (pages 6,9 ).
- Interior floor support may vary a maximum of 4 feet from centerline (page 9).

Roof Notes (see pages 7, 8 \& 9)

- Always use roof live and dead loads that meet or exceed the required design loading.
- No roof load reductions have been taken.
- Table assumes 2'-0" roof overhang.

Ridge Beam (see page 8)

- Deflection is limited to L/240 live load and L/180 total load.
- Table based upon either simple or continuous beam span conditions.

Header (Roof) (see page 7)

- Deflection is limited to L/240 live load and L/180 total load.

1. Design values apply to common bolts that conform to ANSI ASME standard B18.21-1981 (ASTM A307 Grades A\&B, SAE J429 Grades 1 or 2, or higher). A washer not less than a standard cut washer shall be between the wood and the
bolt head and between the wood and the nut. The distance bolt head and between the wood and the nut. The distance from the edge of the beam to the bolt holes must be at least
$2^{\prime \prime}$ for $1 / 2$ bolts and $21 / 2^{\prime \prime}$ for $5 / 8$ " bolts. Bolt holes shall be the same diameter as the bolt.
2. The nail schedules shown apply to both sides of a 3-member beam.
3. 7" wide beams must be top-loaded or loaded from both side (lesser side shall be no less than $25 \%$ of opposite side).

## Top-Loaded Applications

For top-loaded beams and beams with side loads with less than those shown:

| Plies | Depth | Nailing | Maximum Uniform Load From One Side |
| :---: | :---: | :---: | :---: |
| (2) $13 / 4$ " plies | Depths 117/8" \& less | 2 rows 16d box/sinker nails @ 12" o.c. | 400 plf |
|  | Depths 14"-18" | 3 rows 16d box/sinker nails @ 12" o.c. | 600 plf |
|  | Depth $=24{ }^{\prime \prime}$ | 4 rows 16d box/sinker nails @ 12" o.c. | 800 plf |
| (3) $13 / 4$ " ${ }^{\text {plies }}{ }^{(2)}$ | Depths $117 / 8^{\prime \prime}$ \& less | 2 rows 16d box/sinker nails @ 12" o.c. | 300 plf |
|  | Depths 14" - 18" | 3 rows 16d box/sinker nails @ 12" o.c. | 450 plf |
|  | Depth $=24{ }^{\prime \prime}$ | 4 rows 16d box/sinker nails @ 12" o.c. | 600 plf |
| (4) $13 / 4$ " plies | Depths 18" \& less | 2 rows $1 / 2$ " bolts @ 24" o.c., staggered | 335 plf |
|  | Depth $=24{ }^{\prime \prime}$ | 3 rows $1 / 2$ " bolts @ 24" o.c., staggered every 8" | 505 plf |
| (2) $31 / 2 /$ plies | Depths 18" \& less | 2 rows $1 / 2$ " bolts @ 24" o.c., staggered | 855 plf |
|  | Depth 20" - 24" | 3 rows $1 / 2$ " bolts @ 24" o.c., staggered every 8" | 1285 plf |

1. Beams wider than 7 " must be designed by the engineer of record.
2. All values in these tables may be increased by $15 \%$ for snow-load roofs and by $25 \%$ for non-snow load roofs where the building code allows.
3. Use allowable load tables or BC CALC® software to size beams.
4. An equivalent specific gravity of 0.5 may be used when designing specific connections with VERSA-LAM ${ }^{\text {® }}$
5. Connection values are based upon the 2005 NDS.
6. FastenMaster TrussLok, Simpson Strong-Tie SDS and SDW and USP WS screws may also be used to connect multiple member VERSA-LAM® beams, contact Boise Cascade EWP Engineering for further information.

## Designing Connections for Multiple VERSA-LAM ${ }^{\circledR}$ Members

When using multiple ply VERSA-LAM ${ }^{\circledR}$ beams to create a wider member, the connection of the plies is as critical as determining the beam size. When side loaded beams are not connected properly, the inside plies do not support their share of the load and thus the load-carrying capacity of the full member decreases significantly. The following is an example of how to size and connect a multiple-ply VERSA-LAM ${ }^{\circledR}$ floor beam.

Given: Beam shown below is supporting residential floor load ( 40 psf live load, 10 psf dead load) and is spanning $16^{\prime}-0^{\prime \prime}$.
Beam depth is limited to 14 "

Find: A multiple $13 / 4$ " ply VERSA-LAM ${ }^{\circledR}$ that is adequate to support the design loads and the member's proper connection schedule.

1. Calculate the tributary width that beam is supporting: $14^{\prime} / 2+18^{\prime} / 2=16^{\prime}$
2. Use PLF tables on pages 28-30 of ESG or BC CALC ${ }^{\circledR}$ to size beam.

A Triple VERSA-LAM ${ }^{\circledR} 2.0310013^{\prime \prime \prime} \times 14$ " is found to adequately support the design loads
3. Calculate the maximum plf load from one side (the right side in this case).

Max. Side Load $=\left(18^{\prime} / 2\right) \times(40+10 \mathrm{psf})=450$ plf
4. Go to the Multiple Member Connection Table, Side-Loaded Applications, $13 / 4$ " VERSA-LAM ${ }^{\circledR}, 3$ members
5. The proper connection schedule must have a capacity greater than the max. side load:

Nailed: 3 rows 16d sinkers @ 12" o.c: 525 plf is greater than 450 plf OK
Bolts: $1 / 2$ " diameter 2 rows @ 12" staggered: 755 plf is greater than 450 plf OK

- Offset and stagger nail rows from floor sheathing and wall sole plate.
- Simpson Strong-Tie A35 and LPT4 connectors may be attached to the side VERSA-LAM ${ }^{\circledR}$. Use nails as specified by Simpson Strong-Tie.
(Narrow Face)

Nailing Perpendicular to Glue Lines (Wide Face)

## Nailing Notes

1) For $13 / 4$ " thickness and greater, 2 rows of nails (such as for a metal strap) are allowed (use $1 / 2^{\prime \prime}$ minimum offset between rows and stagger nails).

## VERSA-LAM ${ }^{\circledR}$ Beam Details

Provide
moisture barrier
at support and
lateral restraint.

VERSA-LAM ${ }^{\circledR}$ Installation Notes

- Minimum of $1 / 2$ " air space between beam and wall pocket or adequate barrier must be provided between beam and concrete/masonry.
- VERSA-LAM ${ }^{\circledR}$ beams are intended for interior applications only and should be kept as dry as possible during construction.
- Adequate bearing shall be provided. If not shown on plans, please refer to load tables in - Continuous lateral support of top of beam shall be provided (side or top bearing framing). your region's Specifier Guide.

## Allowable Holes in VERSA-LAM ${ }^{\circledR}$ Beams

## Notes

1. Square and rectangular holes are not permitted.
2. Round holes may be drilled or cut with a hole saw anywhere within the shaded area of the beam.
3. The horizontal distance between adjacent holes must be at least two times the size of the larger hole.
4. Do not drill more than three access holes in any four foot long section of beam.
5. The maximum round hole diameter permitted is:

End Bearing
6. These limitations apply to holes drilled for plumbing or wiring access only. The size and location of holes drilled for fasteners are governed by the provisions of the National Design Specification ${ }^{\circledR}$ for Wood Construction.
7. Beams deflect under load. Size holes to provide clearance where required.
8. This hole chart is valid for beams supporting uniform load only. For beams supporting concentrated loads or for beams with larger holes, contact Boise Cascade EWP Engineering.

BCI ${ }^{\circledR}$ Joists, VERSA-LAM ${ }^{\circledR}$ and ALLJOIST ${ }^{\circledR}$ must be stored, installed and used in accordance with this Installation Guide, building codes and to the extent not inconsistent with this Installation Guide, usual and customary building practices and standards. VERSA-LAM ${ }^{\circledR}$, ALLJOIST ${ }^{\circledR}$ and $\mathrm{BCl}{ }^{\circledR}$ Joists must be wrapped, covered and stored off of the ground on stickers at all times prior to installation. VERSA-LAM ${ }^{\circledR}$, ALLJOIST ${ }^{\circledR}$ and $\mathrm{BCl}{ }^{\circledR}$ Joists are intended only for applications that assure no exposure to weather or the elements and an environment that is free from moisture from any source, or any pest, organism or substance which degrades or damages wood or glue bonds. Failure to correctly store, use or install VERSA-LAM ${ }^{\circledR}$, ALLJOIST $^{\circledR}$, and $\mathrm{BCl}^{\circledR}$ Joist in accordance with this Installation Guide will void the limited warranty.
